

**North Path**  
An Invenenergy Project

## North Path

**New Mexico North Path (North Path) is a high-voltage direct-current (HVDC) transmission line that will deliver up to 4,000 megawatts of clean, domestically produced wind energy from northeastern New Mexico to the Four Corners region, helping power New Mexico and other western states.**

### A Pathway Forward for New Mexico's Renewable Energy

Northeastern New Mexico boasts some of the strongest wind and solar energy potential in the nation. Invenenergy is working with the New Mexico Renewable Energy Transmission Authority (RETA) to advance North Path.

**“Invenenergy Transmission has a strong track record and is committed to doing things the right way, which they have shown from the very beginning of their work in New Mexico, and we know that will continue into the future.”**

New Mexico RETA Executive Director Fernando Martinez

### Public Engagement

Recognizing the importance of public perspectives, Invenenergy is involving the public in project design. Initial briefings with Federal, Tribal, State, and County elected officials and agencies introduced the project and the company's plan for further public engagement. Invenenergy Transmission also sought additional advice and insight about the project from local citizens and Tribes. Invenenergy Transmission hosted public open house meetings in Summer 2022 to share information about the project with members of the public and landowners along the preliminary corridors and hear public input. Opportunities for the public to comment will continue throughout project development.

### About Invenenergy

Invenenergy Transmission LLC is the developer and owner of North Path and an affiliate of Invenenergy, a leading developer and operator of renewable and sustainable energy solutions. Powered by decades of experience building and operating energy assets, we understand engagement and collaboration is essential for our project communities. Invenenergy has developed 30GW of renewable generation, over 200 projects, and maintained strong relationships in Project areas, which is a critical part of our mission to build a more sustainable world. Through the hard work of our diverse and insightful team, we commit to helping build strong local economies and advancing environmental responsibility, to deliver clean energy to meet the needs of tomorrow.

Fall 2023

## Project Need

Help **satisfy growing demand** for renewable energy in New Mexico and other western states

Help New Mexico meet its Energy Transition Act requirement of **50% renewable energy by 2030**

Provide economic benefits associated with developing a major renewable energy industry. Up to **\$11 billion in total renewables investment** in New Mexico is projected by 2032

## Environmental and Economic Benefits

Equivalent to **1 million cars** off the road

**2 million homes** powered by renewable energy

**Tens of millions of dollars** in annual payments to Tribal, State, and Local governments, as well as direct payments to landowners

**Thousands of jobs** during the construction period and **dozens of long-term family-sustaining jobs** during operation

The **\$2 billion** North Path transmission line can unlock an additional **\$5 billion** investment in New Mexico renewable generation

With over 200 sustainable energy projects successfully developed, including in New Mexico, Invernergy has active **relationships with over 12,000 landowners, 80% of whom are farmers or ranchers.**

**"I can tell you this, my experience with Invernergy was very positive. Any kind of issue that came up, they were great to deal with and were always open to solutions. It was a seamless experience from start to finish. I'm very, very satisfied with them."**
